

## OnGuard Integration

As a member in the Lenel OpenAccess Alliance Program (OAAP), Salient's CompleteView Video Management System (VMS) and OnGuard® access control system are now integrated to provide video with access control event information in a single, powerful interface.

CompleteView delivers everything you need to manage your video surveillance system – from a single server with a few cameras to a multi-server, multi-site enterprise installation with unlimited clients. Analog, IP, megapixel and HD video feeds can all be incorporated seamlessly into an OnGuard system. You can instantly access, monitor and review live and recorded video from any camera connected to any CompleteView recording server in the system. Alerts and incidents can be further reviewed through CompleteView's client investigation tools.

With a comprehensive set of integrated video and access control security features, the OnGuard and CompleteView VMS solution provides actionable information with live viewing and playback features. From within OnGuard, operators can view live and recorded video from CompleteView cameras based on events or upon manual request. The integration's alarm monitoring allows users to easily monitor CompleteView server status and camera events, such as motion detection. Video recordings of access control and other events can be called up by clicking on the event in OnGuard providing a faster response to security incidents.

### FEATURES

- Single interface for video and access control security systems
- Seamlessly integrates with OnGuard access control and visitor management system
- Full interaction with CompleteView live and recorded video
- Per-camera configuration of all video streaming and recording parameters including resolution, frame rate, schedule, motion and event recording and storage location
- Change cameras on-the-fly to any camera in the system
- CompleteView video recordings are automatically associated to corresponding events in OnGuard

# TECHNICAL SPECIFICATIONS
